>>> In the Spotlight: Project Extension until 30 September 2020!!!!!!!!!

>>> Project Updates

A request for the 9-month extension of LIFE No_Waste project duration until 30/09/2020 was submitted and accepted by the EASME (Amendment n° 4).

By the Project Coordinator (In December 2019): "The technical and scientific part of the project (notably the preparation of the new soil additives and the implementation of a “Pilot Project”) is now considered fully and successfully accomplished. The main challenges now are to move from the relevant technical and scientific knowledge acquired to further application in the real world and at real scale, ensuring that others will use what has been demonstrated (effective replication)."
